Brand Name: **VIAGRA**

Generic Name: **Sildenafil Citrate**

Generic for Viagra* (Sildenafil Citrate) is prescribed for the treatment of erectile dysfunction. It is also indicated for pulmonary arterial hypertension (PAH). This medication relaxes muscles in the penis and increases blood flow in it, thereby helping men to achieve and maintain an erection. Sildenafil Citrate does not protect against sexually transmitted diseases. This medicine may also be used to treat other conditions as determined by your doctor. [Read More>>](#)

Drug Information

What is Generic for Viagra* used for?

Generic for Viagra* (Sildenafil Citrate) is prescribed for the treatment of erectile dysfunction. It is also indicated for pulmonary arterial hypertension (PAH). This medication relaxes muscles in the penis and increases blood flow in it, thereby helping men to achieve and maintain an erection. Sildenafil Citrate does not protect against sexually transmitted diseases. This medicine may also be used to treat other conditions as determined by your doctor.

What is the recommended dosage of Generic for Viagra*?

The dosage of Generic for Viagra* prescribed to each patient will vary. Always follow your physician's instructions and/or the directions on the prescription drug label. The following dosage information includes the common dose of Generic for Viagra*. If your dose is different, do not follow the dosage described below unless your physician has approved.

The recommended dosage of Generic for Viagra* is 50 mg one hour before sexual activity.

What if you overdose on Generic for Viagra*?

Any medication taken in excess can have serious consequences. If you suspect an overdose of Generic for Viagra*, seek medical attention immediately.

What other drugs could interact with Generic for Viagra*?

- Cimetidine
- Clarithromycin
- Clotrimazole

-  [Voriconazole](#)

It may be noted that drugs other than those listed above may also interact with Generic for Viagra*. Usually drug interactions occur when it is taken with another drug or with food. Before you take a medication for a particular ailment, you should inform the health expert about intake of any other medications including non-prescription medications, over-the-counter medicines that may increase the effect of Generic for Viagra*, and dietary supplements like vitamins, minerals and herbal, so that the doctor can warn you of any possible drug interactions.

Generic for Viagra* can interact with heart or blood pressure medications, antidepressants, antibiotics, antifungal medications, and HIV/AIDS medicines.

Do let your doctor know if you smoke, consume alcohol or caffeinated drinks, or use illegal drugs as these may interfere with the action of your medication. Make sure to inform your doctor of any medical conditions you may have, or any family history of medical problems. Do not start or stop using any medicine without consulting your doctor.

What are the side effects of Generic for Viagra*?

Like other medicines, Generic for Viagra* can cause some side effects. If they do occur, the side effects of Generic for Viagra* are most likely to be minor and temporary. However, some may be serious and may require the individual to inform the doctor or visit the nearest hospital immediately.

It is pertinent to note that side effects of Generic for Viagra* cannot be anticipated. If any side effects of Generic for Viagra* develop or change in intensity, the doctor should be informed as soon as possible.

Generic for Viagra* can cause side effects such as back pain, upset stomach, stuffy nose, headache, blurred vision, and flushing in your face, neck, or chest. This is not a complete list of all side effects. Do concur with your doctor and follow his directions completely when you are taking Generic for Viagra*.

What are the questions to ask your doctor before taking Generic for Viagra*?

- Is it possible for me to use Generic for Viagra* with other drugs?*
- Should certain beverages, foods and other products be avoided when I use Generic for Viagra*?*
- What are the possible drug interactions of Generic for Viagra*?*
- How will Generic for Viagra* work in my body?*
- How should Generic for Viagra* be used?*
- How to reduce the risk of Generic for Viagra* drug interactions and side effects?*

Note

The health and medical information provided here is intended to supplement and not substitute for the expertise and judgment of your physician, pharmacists or other health care professional. It should not be understood to indicate that the use of Generic for Viagra* is safe, appropriate or effective for you. Always consult your health care professional before using this, or any other, drug.

Is there a certain foods or drinks you should not take before taking Viagra 100 milligrams

Reply

 Replied by Pharmacist @ IDM

Hi, Grapefruit juice decreases the ability of your gut to process Viagra (Sildenafil Citrate) effect. So While you are taking this medicine, you should avoid eating grapefruit or drink grapefruit juice. You may choose an alternative citrus

beverage (such as orange juice). In the event that you are instructed by a healthcare professional to eat grapefruit or drink grapefruit juice, you should immediately discuss with doctor the effects of grapefruit on the blood levels of this medicine. If you notice an increase in any side effect from your medicine, contact your doctor. Your healthcare professionals may be aware of this interaction and may be monitoring you for it. Do not start, stop, or change your medicine or diet before checking with them first.
